

## PK313 Energy Analyzer with Extended Memory Complete System

Order Number:

[PK313]

The PK313 now includes the Extended Memory Option [MEM] with the popular PK313 Package. This saves time and money, by offering the ability to log longer between updates and retain multiple logs inside.

The PK313 package includes the following:

- PowerSight® Energy Analyzer [PS3000]
- Harmonics [HAO]
- Data Logging [LOG]
- PC Control/Analysis [PCCA]
- **Extended Memory [MEM]**
- Three 1 to 1000 Amp Current Probes [HA1000]
- Deluxe Voltage Leads [DXV]
- Soft Operating Case [SCAS2]
- Hard-Shell Carrying Case [CAS3]
- PowerSight Manager Software [PCCA]
- DC wall charger [CHG2]

### Increased Log Capacity

The Extended Memory option extends log capacity by more than 4 times! PowerSight® when fitted with the Extended Memory option can perform a 47-day unmanned load study that includes 53 summary parameters in each record (4540 records at 15-minute intervals yields 47 days). If you are more ambitious, and take the time to configure fewer log parameters, you can log up to 65,535 records! These capabilities will save you time and money by being able to log longer between updates and having more information available in the log for later analysis. In addition, the Extended Memory option allows you to save 8 waveform sets (56 waveforms) without affecting log capacity. That is a 4X increase. Big things come in our small package!

This complete package has all you need for complete source and load analysis of 3-phase (and single phase) circuits in any configuration with currents up to 1000 amps and voltage up to 600 volts. If four HA1000 Current probes are needed order PK314, priced at \$4,100. All complete packages come with our powerful and easy-to-use PSM (PowerSight Manager) software.

### Pricing and Availability

The PK313 is available today. Value priced at \$3,850 US complete.
